To: sales@polygon.io (and/or your account rep) **Subject:** MarketCatalyst — evaluating Polygon as our single data vendor: availability, plans & pricing

Hi Polygon team,

We operate **MarketCatalyst**, a market-intelligence application, currently on your **Stocks Starter** plan (15-minute delayed, 5-year history). We're evaluating **consolidating our entire data stack onto Polygon** and need to confirm what's available — and at which plan/add-on and price — before we commit.

What we already run on Starter today: aggregates/bars, universal snapshots, grouped-daily (movers), dividends & splits, related-companies (peers), market status & holidays, treasury yields (/fed/v1), GAAP financials (/vX/reference/financials), IPO calendar, options contracts, ticker news, ticker details (name/SIC/market-cap/description/logo), and the full ticker reference/universe.

We'd appreciate your answers in two groups.

A) Products we believe you offer — please confirm the exact endpoint, the plan/add-on required, and pricing:

1. **Real-time US equities** (removing the 15-min delay) + the **real-time WebSocket** (wss://socket.polygon.io).
2. **Indices** — real index levels for **S&P 500, Nasdaq-100, Dow, Russell 2000, and VIX** (e.g. I:SPX, I:NDX, I:DJI, I:RUT, I:VIX). (We currently approximate these with ETFs.)
3. **Short Interest / Short Volume** endpoints.
4. **Crypto** (e.g. X:BTCUSD).
5. **Historical aggregates beyond 5 years**.
6. The **non-experimental Financials API** (/stocks/financials/v1/*) — which plan/add-on it requires.

B) Data we need but couldn't find in your catalog — for each, please tell us (a) whether it's available today with the endpoint + plan, or (b) if not, whether it's on your roadmap or can be provided:

7. **Analyst data** — consensus ratings (buy/hold/sell), rating changes (upgrades/downgrades), and **price targets** (consensus + per-firm).
8. **Forward earnings estimates** — consensus EPS/revenue estimates.
9. **Consensus / non-GAAP (adjusted) EPS** — actual-vs-estimate for beat/miss. (Your Financials API is GAAP-from-filings; we need the Street/consensus basis that matches NASDAQ/IBD.)
10. **Forward earnings calendar** — upcoming report dates for the full US market, with EPS/revenue estimates.
11. **Institutional ownership / 13F rollup** — ticker-indexed % owned and holder counts.
12. **Earnings-call transcripts**.
13. **Economic data** — a **forward economic-release calendar with consensus estimates**, plus a broad set of macro series (CPI, core CPI, unemployment, nonfarm payrolls, fed funds, PPI, retail sales, initial jobless claims, GDP, industrial production, consumer sentiment). (Your /fed/v1 appears limited to treasury yields + inflation.)
14. **Commodities spot** — WTI crude and gold spot (not ETF proxies).

Could you share pricing for the plan/add-on combination that covers the **(A)** items, and indicate which **(B)** items you support (or plan to)? Happy to set up a call.

Best regards, [Your name] · [Title] MarketCatalyst · [email] · [account / current plan ID]

Email to Financial Modeling Prep (FMP)

To: sales@financialmodelingprep.com (and/or your account rep) **Subject:** MarketCatalyst — consolidating onto FMP as our single data vendor: coverage, plan tier & two gaps

Hi FMP team,

We operate **MarketCatalyst**, a market-intelligence application, already using your [/stable/](#) API for the fundamentals/analyst layer (earnings estimates & surprises, analyst consensus/grades/price-targets, institutional 13F ownership, earnings-call transcripts, economic calendar, sector performance, and stock news). We're planning to **consolidate our entire data stack onto FMP** and need to confirm coverage, the right plan tier, and clarify a couple of gaps.

A) Please confirm the endpoint, the required plan tier, and symbol coverage for each — we intend to move these onto FMP:

1. **Quotes & prices** — real-time (or acceptable delayed) quotes, batch/full-market quotes, and a **WebSocket** — and which plan each needs.
 2. **Historical bars** — daily EOD and intraday (1/5/30-min); how much **intraday history** per tier.
 3. **Full-market EOD (batch)** — all US listings for a given day (we compute breadth/movers/recaps from this).
 4. **Index quotes** — S&P 500, Nasdaq, Dow, Russell 2000, and **VIX** ([^GSPC](#) / [^IXIC](#) / [^DJI](#) / [^RUT](#) / [^VIX](#)) — confirm real index levels + VIX.
 5. **Commodities** — WTI crude and gold spot.
 6. **Crypto** — BTC/USD.
 7. **Treasury rates**.
 8. **Economic indicators** — CPI, core CPI, unemployment, nonfarm payrolls, fed funds, PPI, retail sales, initial jobless claims, GDP, industrial production, consumer sentiment.
 9. **Movers** — biggest gainers / losers / most-active.
 10. **Market hours & holidays**.
 11. **Dividends & splits**.
 12. **Company profile** — sector, industry, description, logo.
 13. **Peers** — stock-peers.
 14. **Insider trading** (SEC Form 4 equivalent).
 15. **IPO calendar** and **IPO prospectus / registration pipeline** (S-1 / 424B) — confirm coverage.
 16. **Ticker universe** (stock list) & **symbol search**.
 17. **Financial statements** — income, balance sheet, cash flow.
 18. **Technical indicators** (or we'll compute from your bars).
-

B) Gaps / clarifications — for each, please tell us if it's available (with the endpoint), on the roadmap, or not offered:

1. **Short interest** — do you have any short-interest product or roadmap? (*This is our single hard gap.*)
2. **Revenue (sales) surprise** — actual-vs-estimate for **revenue** (your [/stable/earnings](#) appears EPS-only; is revenue surprise available?).
3. **Real-time depth** — do you offer true **tick / NBBO**, or quote-level only? Typical latency?
4. **Options** — coverage and depth of your options data.

5. **8-K filings** — do you expose SEC 8-Ks at **item level** (e.g. item 2.02, Results of Operations) with acceptance timestamps?
6. **Per-firm price targets** — coverage/completeness and firm-name normalization (we see gaps joining `grades` ↔ `price-target-news`).
7. **News sentiment** — reliability/coverage of the sentiment field.
8. **Commercial** — rate limits / burst behavior for a single-vendor production load, and **redistribution licensing** if FMP becomes our sole displayed feed.

Could you recommend the **plan tier** that covers the **(A)** items, confirm the **(B)** items, and share pricing? Glad to hop on a call.

Best regards, [Your name] · [Title] MarketCatalyst · [email] · [account ID]
